

High in protein

Breeding supplement

Live food replacement

Finch Soft Food is a high-protein supplement for finches and softbills. Feed to breeding birds, as a substitute for live food, or to improve a seed-based diet.

About Finch Diets

In the wild, finches feed mainly on green seeding grasses. Many species also supplement their diet with live food such as insects and larvae. Their natural diet generally provides superior protein and nutrient levels compared to the dry seed mixes fed in captivity. Commercial finch seed lacks a range of essential nutrients, such as amino acids, vitamins & minerals which are particularly required for breeding or moulting birds.

Benefits of Finch Soft Food

- **Excellent Nutrition** – Highly digestible protein with a balance of amino acids for muscle and feather condition.
- **Improved Breeding Condition** – Vitamins, minerals and omega 3 & 6 to enhance egg production and chick health.
- **Ideal Live Food Substitute** – Easy and nutritious replacement to feeding live food.

Directions

Add water to make a moist crumble, or mix with finely diced vegetables, chopped greens or soaked seed. Refer to feeding guide on pack.

Live Food: Birds that consume live food may be enticed to eat Finch Soft Food by mixing in small insects with the prepared food (e.g. chopped mealworms, fly pupae or termites).

Finch Soft Food can also be used to boost the protein and nutrient levels in the diet of other breeding birds including parrots, lorikeets & cockatoos.

Ingredients

Processed cereals (wheat, barley, oats) soy & whey protein isolates, meat meal, vegetable oils, omega-3 & omega-6 fatty acids, lysine, methionine, taurine, carotenoids, vitamins A, B₁, B₂, B₃, B₅, B₆, B₉, B₁₂, C, D₃, K, biotin, choline, calcium, phosphorus, potassium, sodium, magnesium, zinc, iron, manganese, copper, iodine, selenium, 1g/kg Actigen® dried yeast prebiotic.
