

The Good Oil

Omega 3 & 6 Blend for Birds

A supplement containing essential fatty acids to improve the health of birds and their eggs.

What are essential fatty acids (EFAs)?

EFAs are the omega 3 & 6 components of fat that cannot be synthesized by the body and must therefore be supplied in the diet. Eggs contain over 25% unsaturated fat composed of oleic, omega 3 and omega 6 fatty acids. Seed mixes alone do not provide the EFAs that breeding birds require so dietary supplementation is important for improved breeding success.

The Good Oil contains the following EFAs and fat-soluble vitamins:

Omega 3 & 6 fatty acids which are essential for egg-laying, chick growth and immunity.

Vitamin A for cell development in the embryo.

Vitamin D₃ for absorption of calcium, bone growth and eggshell formation.

Vitamin E which is an antioxidant and helps maintain cell membranes.

Dose: Mix 15mL of The Good Oil per kg of seed. Let mix stand for at least 4 hours at room temperature before feeding. This ensures that the oil soaks into the kernel of the seed.

Each mL contains

380mg	Oleic Acid (omega 9)
350mg	Linoleic Acid (omega 6)
130mg	α -linolenic Acid (omega 3)
15mg	Eicosapentaenoic Acid (omega 3)
6mg	Docosahexaenoic Acid (omega 3)
15 μ g	Vitamin A
1 μ g	Vitamin D ₃
2mg	Vitamin E

Available in 250mL, 1L and 5L
