

Carni-Vite

Meat Supplement for Carnivores including dogs, cats & ferrets

Use to supplement the meat diet of pet carnivores, to provide balanced levels of vitamins, minerals and essential nutrients.

About meat diets

Carnivores have evolved to eat a range of whole prey items that include bones, internal organs and meat, thus providing a balanced diet. Pets however, are often fed only the meat portion, which may be deficient in minerals (such as calcium), vitamins, and essential nutrients like fatty acids and taurine.

Carni-Vite

Supplies a range of essential nutrients that, when added to meat, provides a complete and balanced diet for carnivores.

Ingredients

Vitamins, minerals, essential fatty acids (omega-3 & 6), taurine, carotenoids.

Dosage

Add 5g of Carni-Vite per 500g of de-boned, eviscerated meat or fish and mix in well.

Do not use with already fortified diets or other vitamin/mineral preparations.

Available in 100g, 500g & 1kg packs.
